

AI Sprint Challenge: The Care Loop

An intelligent ownership companion that helps people understand the products they own, care for them, extend their life, and dispose of them responsibly. **All in one place.**

www.thecareloop.app

OWN BETTER. USE FULLY. WASTE LESS.

OWNERSHIP IS FRAGMENTED AFTER PURCHASE

People

- forget maintenance
- miss early signs of problems
- postpone repairs
- replace products too early
- struggle to find the right information or service
- struggle to prove resale value
- hesitate on the best next life for their products

THE MAIN GOAL

**TO SUPPORT
INFORMATIVE,
TIMELY, AND EASY
ACTIONS TO HELP
PRODUCTS STAY IN
USE FOR LONGER**

MISSION

OWN BETTER. USE FULLY. WASTE LESS.

OUR MISSION

Make product ownership and care easy, convenient, and economically attractive by increasing access to information, providing actionable data for decision-making, simplifying access to services, and helping shift behaviors around ownership and waste.

THE FULL OWNERSHIP LOOP, MANAGED IN FIVE STEPS.

01

SCAN OR ASK

Identify the product.

02

GET THE SCORE

Evidence-led **Trust Score**.
Ethics, Planet, Health and Longevity

03

DECIDE BETTER

Compare with other products

(THE CHALLENGE FOCUS)

04

USE FULLY

warranties, care information,
maintenance and repair history
in one place. **Ownership Log**.

05

NEXT LIFE

Repair, resell or recycle.
Product history.
Care Pass.

EVERY ACTION WRITES TO THE OWNERSHIP LOG. THE CARE PASS CERTIFIES THE PRODUCT HISTORY.

MEET THE PRODUCT OWNER

Busy, practical. They want to save money, time, and waste less. They want to get more value from what they own.

They want to:

- Avoid unnecessary replacements and save money
- Repair products when possible
- Resell or pass on products at a better value
- Know what to do at different stages of a product's life
- Have more agency over their environmental impact

They struggle with:

- Finding reliable information about care, repair, resale, and end-of-life options
- Knowing when a product should be maintained, repaired, replaced, resold, or recycled. Product care often falls down the priority list until something goes wrong.
- Understanding which action is the best option
- Finding the time to research and make decisions
- Knowing what to do when something goes wrong

“

Seems also
important to know
when not to try to
repair something

“

I lived in 3 different countries
and rules are always different.

The big hassle with receipts and
warranties is that you don't
always remember you have
them, and they're only useful
when something break so I tend
to forget...and often things break
after the warranty has expired

THE CUSTOMER GOALS

BUY → CARE → REPAIR → RESELL → NEXT LIFE

A person owns a household appliance for several years.

- What would make them care at the right moment?
- What could trigger an interaction?
- What information or support would help them decide what to do?
- How could you make the next action easy and worthwhile?
- What happens if they ignore or postpone it?
- How could the experience make the value of caring, repairing, keeping, or passing on the product visible?

The goal is not simply to remind people. The goal is to help them make better decisions on what happens to a product next.

Notice → Understand → Decide → Act

THE ECOSYSTEM

01

CONSUMERS

Product owners

02

SERVICE PROVIDERS

Repair, maintain, resell
service providers need
access to customers at
the moment of need.

03

RETAILERS

Post-purchase
engagement and
lifecycle visibility.

04

BRANDS AND MANUFACTURERS

Need real-world
product lifecycle data,
product improvement
insight.

WHY **PRODUCT LIFECYCLE** DATA MATTERS?

EU regulation and sustainability reporting are pushing companies to understand what happens to products throughout their lives.

	What it means	Why it matters for this challenge
Digital Product Passport (DPP)	A digital record of product information and lifecycle data, including relevant repair and traceability information.	Data about care, repairs, condition and product history can become part of the product's ongoing record.
Right to Repair	Strengthens consumers' ability to repair products and requires longer availability of certain repair support and spare parts.	Companies need better visibility into what breaks, what gets repaired and what support owners need .
EPR / ESPR	Policies increasingly place responsibility on producers for product sustainability, circularity and lifecycle impacts.	Companies need to understand what happens to products after purchase and at end of life .
CSRD / Scope 3	Companies report on environmental impacts across their value chain, including relevant downstream impacts.	Real-world information about use, lifespan, repair, resale and disposal can help build a clearer picture of product impacts.

“

**HOW CAN WE ENGAGE
PRODUCT OWNERS TO TAKE
ACTION TO EXTEND THE LIFE
OF THE HOUSEHOLD
APPLIANCES THEY OWN?**

POTENTIAL AI APPLICATIONS

SCAN

Identify an appliance, model, component, error code or visible condition.

INTERPRET

Translate technical product or usage data into plain-language meaning.

PREDICT

Identify likely maintenance needs, durability, abnormal patterns or moments of intervention.

RECOMMEND

Choose the next best action based on product, owner context and available services.

ASSIST

Answer questions and potentially take actions across the ownership log.

LEARN

Use feedback to improve future recommendations. Build trust, make uncertainty visible.
